

# GAMBIT: The Global and Modular Beyond-the-Standard-Model Inference Tool

The GAMBIT Collaboration

January 9, 2015

## **Abstract**

blah

## **1 Introduction**

Context of GAMBIT:

Brief history of BSM global fitting code/collabs/studies

What we do better (in a nutshell)

## **2 Design concept**

general description

including rollcall system, functor graph, definitions of "modules", "backends", "capabilities", "dependencies"; glossary?

## **3 Modules**

Short summary (1-2 paragraphs) of the modules we have already

### **3.1 Module function declaration**

## **4 Backends**

Details of backend system

## **4.1 BOSS**

## **4.2 Backend function declaration**

# **5 Hierarchical model database**

## **5.1 Model declaration**

model definition process  
map to capability

## **5.2 Recasting models**

interpretation functions (as parent, as X)

# **6 Dependency Resolver**

graph design + solution

# **7 Statistics and scanning**

general overview of statistical framework(s) and scannerbit.  
specific likelihood forms in appendix.

# **8 User interface and input file**

command line switches, general usage  
yaml file parsing and syntax, structure, etc.

## **9 Utilities**

### **9.1 Type handling**

### **9.2 Logging**

### **9.3 Output**

### **9.4 Exceptions**

### **9.5 Random numbers**

### **9.6 Funktions? Base Fuctions?**

## **10 Configuration and automatic component registration**

build system + harvester scripts

## **11 Minimal examples**

using ExampleBits + spartan

## **12 Releases and support**

Describe different releases Website and support feat. FAQ and known issue + bugs, serving, code availability, release strategy

**13 Summary**

**14 Acknowledgements**

**A Quick start guide**

**B Dependencies and supported compilers**

**C Likelihood forms**
