Finding Beyond the Standard Model (BSM) Physics

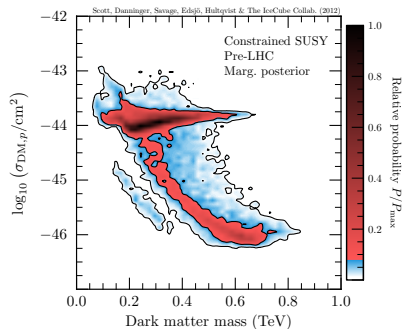

A story of complementarity...

- Existing data give us some constraints

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints
- Direct searches for dark matter constrain cross-sections with nuclei

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints
- Direct searches for dark matter constrain cross-sections with nuclei
- Accelerator searches rule out lighter masses

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints
- Direct searches for dark matter constrain cross-sections with nuclei
- Accelerator searches rule out lighter masses
- Indirect searches for dark matter constrain annihilation cross-sections (+ some nuclear cross-sections)

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints
- Direct searches for dark matter constrain cross-sections with nuclei
- Accelerator searches rule out lighter masses
- Indirect searches for dark matter constrain annihilation cross-sections (+ some nuclear cross-sections)

“Astroparticle road to new physics” = finding/constraining new physics with astro AND particle data as co-navigators

Finding Beyond the Standard Model (BSM) Physics

A story of complementarity. . .

- Existing data give us some constraints
- Direct searches for dark matter constrain cross-sections with nuclei
- Accelerator searches rule out lighter masses
- Indirect searches for dark matter constrain annihilation cross-sections (+ some nuclear cross-sections)

“Astroparticle road to new physics” = finding/constraining new physics with astro AND particle data as co-navigators

This example is a gross simplification – the devil is in the detail.

Many talk about complementarity, far fewer walk the walk quantitatively → global BSM fits

Global fits in the current era

Lots of data flowing from LHC, direct and indirect dark matter detection experiments

→ new “Implications of $\langle data X \rangle$ for supersymmetry” fit update every few months

Issues with current global fit codes:

- Strongly wedded to a few theories (e.g. constrained minimal SUSY Standard Model)
- Strongly wedded to a few theory calculators
- All datasets and observables basically hardcoded
- Rough or non-existent treatment of most experiments (astroparticle + collider especially)
- Sub-optimal statistical methods / search algorithms
- \implies *already hitting the wall on theories, data & computational methods*

GAMBIT: a *second-generation* global fit code

GAMBIT: Global And Modular BSM Inference Tool

Overriding principles of GAMBIT: flexibility and modularity

- General enough to allow fast definition of new datasets and theoretical models
- Plug and play scanning, physics and likelihood packages
- Extensive model database – not just small modifications to constrained MSSM (NUHM, etc), and not just SUSY!
- Extensive observable/data libraries (likelihood modules)
- Many statistical options – Bayesian/frequentist, likelihood definitions, scanning algorithms
- A smart and *fast* LHC likelihood calculator
- Massively parallel
- Full open-source code release

The GAMBIT Collaboration

23 Members, 12 Institutes

8 Experiments, 3 major theory codes

Fermi-LAT	P. Scott , J. Conrad, J. Edsjö, G. Martinez
IceCube	P. Scott , J. Edsjö, C. Savage
ATLAS	A. Buckley, C. Clement, P. Jackson, A. Saavedra, M. White
CMS	C. Rogan,
HESS	J. Conrad, H. Dickinson
AMS-02	A. Putze
CTA	T. Bringmann, J. Conrad, H. Dickinson
DARWIN	J. Conrad
Theory	P. Scott , C. Balázs, T. Bringmann, L.-A. Dal, J. Edsjö, B. Farmer, A. Krislock, A. Kvellestad, N. Mahmoudi, A. Raklev, C. Savage, C. Weniger

The GAMBIT Collaboration – the future

28 Members, 14 Institutes

10 Experiments, 3 major theory codes

Fermi-LAT	P. Scott, J. Conrad, J. Edsjö, G. Martinez
IceCube	P. Scott, J. Edsjö, C. Savage
ATLAS	A. Buckley, C. Clement, P. Jackson, A. Saavedra, M. White
CMS	C. Rogan, +2 (Imperial)
HESS	J. Conrad, H. Dickinson
AMS-02	A. Putze
CTA	T. Bringmann, J. Conrad, H. Dickinson
DARWIN	J. Conrad
Theory	P. Scott, C. Balázs, T. Bringmann, L.-A. Dal, J. Edsjö, B. Farmer, A. Krislock, A. Kvellestad, N. Mahmoudi, A. Raklev, C. Savage, C. Weniger
LUX/LZ	+1 (Imperial)
LHCb	2 members approached

The GAMBIT Collaboration – the future

28 Members, 14 Institutes, 6 UK members

10 Experiments, 3 major theory codes

Fermi-LAT	P. Scott, J. Conrad, J. Edsjö, G. Martinez
IceCube	P. Scott, J. Edsjö, C. Savage
ATLAS	A. Buckley, C. Clement, P. Jackson, A. Saavedra, M. White
CMS	C. Rogan, +2 (Imperial)
HESS	J. Conrad, H. Dickinson
AMS-02	A. Putze
CTA	T. Bringmann, J. Conrad, H. Dickinson
DARWIN	J. Conrad
Theory	P. Scott, C. Balázs, T. Bringmann, L.-A. Dal, J. Edsjö, B. Farmer, A. Krislock, A. Kvellestad, N. Mahmoudi, A. Raklev, C. Savage, C. Weniger
LUX/LZ	+1 (Imperial)
LHCb	2 members approached (one UK)

The point is not just to write code – but to ***use*** it. . .

- Aiming for first comprehensive 25-parameter MSSM global analysis
- Extensive SUSY-breaking model comparison
- Global fits to many non-SUSY models (2 Higgs Doublet, extra dimensions, isospin-violating dark matter, etc)
- Model comparison of different BSM scenarios
- Each physics module, + scanner module, will have dedicated paper and code release
- GAMBIT code will become the go-to package, and GAMBIT papers the go-to results, for combined interpretation of BSM physics searches in the future
